January 18, 2016

### **New Family of Non-condensing Concentric Vent Tankless Water Heaters**

We are pleased to announce the launch of the Simplicity Series, a family of non-condensing tankless heaters. The Simplicity Series vents with contractor-preferred concentric vent materials that are similar in design to other commercially available products. This new series also features a combustion system that can easily be field converted from natural gas to propane with components supplied in the box. This reduces inventory complexity by 50% and helps ensure product availability when contractors come in looking for propane heaters.

Other important features include:

- Wide range of BTU/H inputs to cover most residential and commercial applications
- Vents up to 43' with Centrotherm APNC35 concentric vent materials
- Easily converted from natural gas to propane with the supplied gas conversion kit
- Integrated controls make temperature changes easy and simplifies troubleshooting
- Industry leading 15-year residential heat exchanger warranty

Please feel free to contact your A. O. Smith Sales Representative or us if you have any questions or need further details.

Sincerely,
